ARTEOR™ ADVANCE

For premium projects with character

Arteor Advance is about turning a successful classic into something even better. The starting point for this redesign are the features of the Arteor range that specifiers, engineers and contractors alike have appreciated for years: easy and safe installation, the endless possibilities offered by the modularity of the range, and its versatility which makes it suitable for projects of all types, all over the world.

Arteor Advance makes it even easier to deliver premium projects. With its completely new design, connected, smart and sustainable, the range will help you express your very own personal style.

VISIONARY.

Design as expression of a lifestyle

The design of Arteor Advance is a response to current technological developments and social evolutions. At a time of expanding urbanization, where work can be performed anywhere, and with the boundaries between the virtual and real worlds becoming increasingly blurred, there is a growing demand for intuitive technology with a human feel.

Design trend: combining minimalism with opulence

The ubiquitous touchscreen awakens the need for real experience, involving the senses of touch, hearing, and sight. That's why contemporary interior design today is often inspired by 'visual richness', with intense colours, striking patterns, lots of plants and statement furniture. This is then teamed with minimalistic details, limited to basic shapes and understated colours and forms. These can either be integrated with harmony in mind or deliberately used to create a distinct contrast.

INNOVATIVE.

Smart & Connected

Connectivity and smart functions are part and parcel of everyday life these days. They are indispensable both at home and at work, and when we are on the move. As part of Legrand's smart ecosystem, Arteor Advance offers not only familiar solutions for comfort and safety, but also many energy-saving and sustainability options.

The smart technology comes with a real premium look, integrates seamlessly into users' everyday environments, and improves quality of life everywhere. Not least because it is easy and intuitive to use and can be adapted to individual preferences and needs.

COMMITTED.
Design is about more
than looks

Arteor Advance concentrates on the essentials, but its design approach is about more than just looks or styling. The avoidance of unnecessary details is also driven by Legrand's commitment to promote sustainability. The development was guided by the principle of 'reduce, reuse, recycle', which takes in every aspect of the life cycle, from product design via production and use through to recycling.

Various measures are aimed at optimising the carbon footprint of the new range. These improvements in the environmental properties are reviewed on a regular basis using methods that are based on the principles of the life cycle analysis.

Arteor Advance is a good example of how Legrand puts its sustainability objectives into practice. At the same time, it supports you in achieving your own targets, as Arteor Advance helps you comply with even the most demanding environmental standards.

Two forms, one design concept

Classic

Design language

Arteor Advance is available in two design lines, with clearly different rocker formats. The Classic design gives a whole new dimension to a classic form. The Elite rocker is a completely new design embodying the trends of the future.

Elite

Floating rocker

The impression created by the floating rocker is the same for both types: Light and elegant, it seems to float above the plate. Both forms can be combined to great effect as well. The Elite version allows to make a clear statement, while the Classic version is more subtle and discreet.

Taking Arteor™ to the next level

Arteor Advance's spectacular design language, the pared-down selection of materials, and the elegant, neutral colour palette all favour design solutions that aspire to deliver outstanding looks and functionality.

Arteor Advance has all the advantages of a modular system that is compatible with all the main installation standards. For your premium projects, all around the world.

The iconic Elite rocker. Slim, aerial and distinctive. Perfect low angle curvature and light signature with a soft glow. Backlit with LEDs, which both underlines its technical feel and improves its functionality. Its location is immediately detectable in the dark.

Visionary and minimalistic

The visionary minimalism of the design concept helps to emphasise the premium credentials of Arteor Advance in every detail. Because the simple and clear looks belie the really ambitious engineering work, the practical design skills, and the meticulous workmanship that go into the products. The deliberately pared-down design language and selection of materials are also in keeping with the broader trend towards greater sustainability.

The Legrand logo – located discreetly on the side
– a sign of demanding design standards

It's all in the details:
a perfect fit and a chamfered plate

Cover for smart wireless batteryless switches:
Futuristic form, optimal function

The floating rocker – a signature feature of the range

Sensual Design

Arteor Advance's premium credentials are not based on looks alone. In-depth research and meticulous attention to detail went into the development of both feel and acoustics to meet the highest standards.

The surfaces not only look classy, they are also elegant to the touch. You can feel the uncompromising quality of the workmanship with every use. In fact you can even hear it, as the switching is accompanied by a rich, soft sound. This called for highly elaborate work in terms of sound design and further underlines the demanding standards that guided the development of Arteor Advance.

There's something organic
about this design.
It stirs an emotion.

Denys Toulemonde, Principal Designer

Simply cater to premium project requirements

With Arteor Advance, the designers successfully combined an attractive sense of technology with a truly exceptional visual style. The range enables interior designers with premium aspirations to satisfy their clients' individual wishes while also expressing their own unique personality.

Although Arteor Advance may appear neutral and discreet, making creative choices among the various available colours, forms and finishes allows to generate visual concepts that are truly out of the ordinary.

STATEMENT COLLECTION

FULL METAL

Midnight Blue

Midnight Blue

A Midnight Blue plate with an iridescent surface, which takes on different shades of colour depending on the light, is the star turn among the Arteor Advance finishes. For exceptional projects with a distinctive character.

STATEMENT COLLECTION

FULL METAL

Solid Aluminium

Solid Aluminium

Aluminium is the material used for the Solid Aluminium and the Midnight Blue full metal plates, a lightweight material with outstanding recycling properties. The elegant look comes from the material's fine texture.

DECOR COLLECTION

METAL FINISHES

Brushed Stainless Steel

Brushed Stainless Steel

With Brushed Stainless Steel plates, a fine layer of genuine material is applied to a base. The metal surfaces create a cool, high-quality impression, while offering a natural look and feel.

DECOR COLLECTION

FROSTED FINISHES

Frosted White

Frosted Black

Frosted White

Frosted Black

The matt, transparent surface on a colour background creates a very particular visual effect, with a unique soft-touch feel that invites contact and interaction.

CLASSIC COLLECTION

BASIC NEUTRAL

Matt White

Matt Black

Matt Titanium

A basic version with a plastic finish completes the range of materials. With its classic form and neutral colours, this version is a good choice for less extravagant building projects that don't want to compromise on design.

Modular design for maximum flexibility

The modular architecture of the range allows to integrate a wide range of different functions within a single plate, whatever the installation standard.

Even where space is scarce, individual configurations are possible.

Full modularity for maximum flexibility.

One plate, two designs – perfect integration

Modularity is also maintained when you want to use both ergonomics, Classic and Elite in one plate. Thanks to special hybrid plates, both design lines can be combined in one plate at the same time, for more creative possibilities with a harmonious look.

Switches in Elite design are easy to combine with socket outlets, dimmers, or USB chargers. Maximum flexibility for a wealth of combinations and a perfect look even when space is limited.

No compromise on installation safety

The tried and tested support frame from the Arteor range has been adopted for Arteor Advance without any changes. Its robustness is valued around the world, as well as its safety. It is, of course, available for all the main installation standards worldwide.

Screw caps can be closed once the support frame is installed, ensuring total insulation.

The support frame combines the robustness of a metal frame with the insulating qualities of plastic overmoulding.

Available for all the main installation standards worldwide.

Plate adjuster for that perfect look

The new plate adjuster is another detail where Arteor Advance underlines its premium quality and uncompromising ambition: This mobile feature is integrated to the rear of the plate and allows to compensate for unevenness in the wall. For that perfect look.

The flexible plate adjuster compensates for unevenness in the wall.

Minimalism with potential

In choosing the colour range, the designers focused on an essential yet elegant selection, without compromising on creativity. As all the colours can be combined, Arteor Advance offers all interior designers creative ways to express themselves.

Many steps towards the goal

Weight reduction:

Every effort was made to reduce weight, not just in the selection of materials, but also with the design and the concept. The purist design of the plates dispenses with anything that is not absolutely essential. Also, the technical and mechanical components have been redesigned with the aim of using as little material as possible. This was achieved without any compromise in terms of safety, quality or robustness – and therefore the long service life of the product. Thanks to the weight savings made, and optimisation of logistics, the carbon footprint for downstream transportation was reduced by 5%.

Increased share of recycled material, improved recyclability

Legrand progressively reduces its dependence on virgin material. Accordingly, the proportion of recycled materials used for Arteor Advance has been improved. This is especially true for recycled plastics, a material that needs to meet stringent quality criteria. The new range contains 10% net recycled plastics and the figure is meant to increase over time. The metals used in the range allow for 60% recycled material. The high-end plates of Arteor Advance are made of Aluminium which is fully recyclable.

Optimised packaging

Legrand reduces the use of single-use materials and aims at reducing packaging at a minimum without sacrificing product protection. When packaging is still necessary, Legrand opts for recycled materials. It goes without saying that the cardboard packaging consists largely of recycled material and is fully recyclable. Single use plastic is no longer used for flow packs.

Environmental credentials made transparent

Product environmental profiles (PEP) will be made available for a significant part of the range. In the first step they are available for core products such as 1-module 1-way 10A and 16A switches. This initiative is progressive, aiming to gradually expand the products featuring PEP.

Live as you want

Everyone has their own ideas about how to arrange their living space, and people's individual preferences regarding the functionality of electrical equipment will vary widely too. With Arteor Advance, everyone can arrange their own private space accordingly and accommodate as much comfort or energy saving as they want. All in a premium consistent design.

Switch with indicator

Smart 2-gang wireless batteryless light switch

Rotary fan controller

Double switch for electric shutter

Exploiting every potential

The new generation of LED dimmers and LED automatic switches are fully LED compatible and can also be used for all other types of modern loads. This makes it possible to exploit the full energy saving potential of LEDs, without losing out on convenience.

USB Type C+C 30W
PD Charger

6A - 3 pin ISI Socket with
10A Elite Switch with Locator

TV-R-SAT sockets

Intelligent & powerful: the new USB chargers

Arteor Advance meets the current USB-C standard with new chargers that integrate harmoniously into the design of the rest of the electrical installation. In addition to their design, they also impress with their performance: they are powerful enough to charge laptops. They also enable "fast charging" and protect the batteries of the connected devices with Power Delivery as they only supply as much power as is needed for charging. Available in 30W, 45W and 63W.

Working with ARTEOR™ ADVANCE

The boundaries between life and work are becoming increasingly blurred. That's why Arteor Advance offers solutions that make life and work both easier and more comfortable, while making optimal use of the possibilities offered by connectivity. The understated design improves both quality of life and productivity.

Arteor Advance mechanisms can be incorporated into Pop-Up boxes or Desk devices of the Incara range: seamless integration into furniture - power and data within easy reach.

All-in-one consistent design:
Power supply for all devices, data outlets and
USB chargers with enough power for charging a laptop.

LED compatible motion sensors
help to save energy as they only
switch lights on when needed.

Contactless switching

A new switch offers a more hygienic way of using lights and doors. It controls lights or opens doors without direct contact. Just position your hand close by, and the desired action will be triggered. In offices, hotels and anywhere lots of people use switches, the contactless switch is a valuable and convenient alternative to traditional solutions.

Contactless switch for
control of lights or doors.

Welcome to the ARTEOR™ ADVANCE Hotel

Looks and functionality are equally important in hotels. Arteor Advance adopts a premium approach to both. Everything that a guest in a high-end hotel might expect is available from Arteor Advance: from the key-card switch and the external unit with the “Do not disturb” and “Make up room” signs, to the individually configurable bedside panel with 6 or 8 modules and powerful USB chargers.

Key-Card Switch

Hotel room call indicator
External unit: displays calls in the corridor.

Bedside panel: Dedicated markings allow for easy identification of the different functions: Master ON/OFF, control of bedlights, curtains, roller blinds, and more.

Internal unit: allows to select the desired setting “Do not disturb/ Make up room”.

USB Type C 45W
PD Charger

Double USB Type-C charger,
63 W, Fast charge feature:
Power Delivery

Shaver Socket

Lots of power with gentle fast charging

USB chargers are an essential feature, and not just for mobile working. They provide enough energy to charge laptops and other devices. The batteries are charged in a particularly resource-efficient manner by intelligently adjusting the charging current to the needs of the devices connected. The new USB chargers with an elegant design are available in a wide range of versions, including in combination with socket outlets.

Best prospects for satisfied guests

The design of Arteor Advance blends in perfectly with the Legrand guest room management solutions such as UXOne, a radio based solution ideally suited for 3 to 4 star hotels.

A large, modern hotel room with a wide bed, a large window overlooking a city at night, and a warm, ambient light. The room features a large bed with white linens and a dark headboard. A large window provides a panoramic view of a city skyline at night, with lights reflecting on the water. The room is illuminated by warm, ambient lighting, creating a cozy and luxurious atmosphere. The ceiling is made of wood, and the walls are dark, with a large, illuminated artwork on the right wall.

Harmony for genuine luxury

For top level hotels, Arteor Advance provides luxury equipment whose harmonious design and optimum functionality will satisfy even the most demanding guests.

television sockets

Information about DAB+

Digital Audio Broadcasting is the radio equivalent of DTT, a global standard used all over the world.

- More radio stations available
- Better sound quality
- Digital data combined with the audio stream
- This socket has a reception range of radio DAB+ 87.5 - 240 MHz
- A link to a collective or individual aerial
- Digital quality

Roll-out in 2024

Source: WorldDAB

- Countries with regular services
- Countries with trials and/or regulation
- Countries with interest

High performance

Return loss input

Coupling attenuation

Certification

Class A sockets, protected with LTE block filter. LTE protection is needed to prevent interference from new signals used by smartphones (3G, 4G, 5G). These undesirable signals can cause picture freezing or breaking up, and distorted sound. Legrand uses the PKM laboratory for Class A certification of its sockets.

Requirements for TV corner

- Multi-gang wiring accessories
- TV attenuation < 1.5 dB
- 17 VATC coaxial cable
- Cat. 6 twisted pairs
- Multi-operator, terrestrial DTT, satellite, cable network and ISP, FM and DAB+ radio reception

- Internet connection

- Smart TV with interactive services
- Connected games console (for online gaming)
